HEALTH AND SAFETY POLICY

At Wagners we are committed to achieving and maintaining the highest practical standard of workplace health and safety in all of our operations. Our objective is to provide a work environment that is totally free of injuries and incidents.

At Wagners we believe

- Safety is everyone's responsibility;
- No job is so important that it cannot be done safely;
- All injuries are preventable;

At Wagners we will strive to achieve continual improvement with the health and safety management at our sites by

- Maintaining a health and safety management system to AS 4801 and AS4804;
- Educating and training employees to ensure they have the necessary skills and knowledge to work safely and contribute to ongoing safety improvement;
- Identifying hazards, assessing risks and implementing and maintaining effective risk management and control strategies at all of our sites;
- Investigating all incidents and accidents transparently to identify root causes and all contributing factors;
- Clearly defining and communicating the health and safety responsibilities and obligations for all staff and holding all staff accountable for their safety behaviour;
- Empowering employees and contractors to find safe solutions if there is an unmanageable risk to their safety or the safety of others;
- Seek continual improvement.

The safety process is an integral part of our business operation and fundamental to our ongoing business success. The success of the health and safety program ultimately depends on the willingness of management, supervisors and staff to cooperate and work collectively as a team to achieve our goal of having work environments which are totally free of injuries and incidents.
