

# QUARRIES & CONTRACT CRUSHING

Wagners operates Quarries throughout Australia and supply a diverse range of products to major infrastructure and resource projects, the civil construction industry and residential and commercial developments.

Products supplied include fill materials, gravel, road base, fine crushed rock, railway ballast, concrete and road aggregates, all produced, stockpiled and managed in adherence with our Quality Assurance framework.

In addition to our fixed quarrying operations, Wagners operates one of Australia's largest mobile crushing, screening and pug mill fleets. The knowledge and experience gained in our fixed operations extends to our mobile operations and enables us to process site materials to our client's requirements efficiently and economically.

Our mobile fleet encompasses track, wheel and skid mounted equipment and is able to be transported to and set-up on site with minimal time to meet our clients production schedules.

# QUARRIES & CONTRACT CRUSHING

The flexibility and capability of these units has allowed Wagners to carry out high capacity production of a broad range of products to meet varying specifications both throughout Australia and Internationally.

Wagners extensive industry experience and broad knowledge of materials extraction and processing ensures the company consistently meets and exceeds the expectations of our contract crushing clients.

We also welcome the opportunity to provide haulage services using company fleet to provide clients with a single source for production and delivery of materials.
