

REINFORCING STEEL

Wagners steel reinforcing division forms part of the folio of Wagners companies servicing the civil construction and residential markets. Wagners has been in the reinforcing industry for over 20 years and has provided reinforcing steel from residential house requirements to large projects such as gas and coal infrastructure, multi-story high-rise buildings, precast beams and transport infrastructure tunnels.

Wagners schedulers work with our team of production and procurement staff to produce reinforcing for project requirements. The manufacturing facilities are ACRS accredited and is processed to AS 4671 standard. Wagners use a combination of off coil and cut and bend processing equipment to provide flexible manufacturing for both large and small scale project requirements.
